Unit vectors may be used to represent the axes of a Cartesian coordinate system. For instance, the standard unit vectors in the direction of the x , y , and z axes of a three dimensional Cartesian coordinate system are $\hat{i} = [1, 0, 0]$, $\hat{j} = [0, 1, 0]$, $\hat{k} = [0, 0, 1]$. They form a set of mutually orthogonal unit vectors, typically referred to as a standard basis in linear algebra. They are often denoted using common vector

The six trigonometric functions can be defined as coordinate values of points on the Euclidean plane that are related to the unit circle, which is the circle of radius one centered at the origin O of this coordinate system. While right-angled triangle definitions allows for the definition of the trigonometric functions for angles between 0 and radian (90°), the unit circle definitions allow
