IMO 1/4" is too much - trapping high heeled shoes; 1/8" may not be enough if the boards swell when wet. Suppose we use a 3/16" gap; then our actual stair treads including the tread nose formed by the outer edge of the outer board of the two will be 11 3/16" in tread depth. That's 11.0625" The total run then becomes very slightly longer

May unnecessarily restrict operations and results . Statistical analysis is often approximate. Thus, for example, using interval analysis for ordinal values may be justified. Transformations are common but don't preserve scales. Can transform data to a new scale with better statistical properties. Many statistical analyses depend only on the

Conjugation with sulfhydryl groups appears to be an important detoxification process for methyl acrylate in the guinea-pig. The thioethers were identified as N-acetyl-S-(2-carboxyethyl)-L-cysteine and the corresponding monomethyl ester, with a ratio between the two metabolites of 20:1. In male rats exposed to methyl acrylate by inhalation, depletion of nonprotein sulfhydryl compounds was most

The performance and flow around an oscillating foil device for current energy extraction (a wingmill) was studied through numerical simulations. OpenFOAM was used in order to study the two-dimensional (2D) flow around a wingmill. A closed loop control law was coded in order to follow a reference angle of attack. The objective of this control law is to modify the angle of attack in order to
